From string f to string t , given array A of size $|f| + 1$ by $|t| + 1$, we can solve using the Needleman–Wunsch algorithm:

i = Insertion cost

d = Deletion cost

`equal()` returns m if characters match, r otherwise

```
lf = strlen(f); lt = strlen(t);
```

```
A[0][0]=0;
```

```
for (j=1; j<=lt; j++) A[j][0] = j * i;
```

```
for (k=1; k<=lf; k++) A[0][k] = k * d;
```

```
for (j=1; j<=lt; j++)
```

```
    for (k=1; k<=lf; k++)
```

```
        A[j][k] = max3( //Or min3 if m<i,d,r
```

```
            A[j][k-1] + d, //Deletion
```

```
            A[j-1][k] + i, //Insertion
```

```
            A[j-1][k-1] + equal(f[k-1],t[j-1])); %Replace or match
```

Final score is at $A[|t|][|f|]$

From string f to string t , given array A of size $|f| + 1$ by $|t| + 1$, we can solve using the Smith–Waterman algorithm:

```
lf = strlen(f); lt = strlen(t);
A[0][0]=0;
for (j=1; j<=lt; j++) A[j][0] = 0;
for (k=1; k<=lf; k++) A[0][k] = 0;

for (j=1; j<=lt; j++)
    for (k=1; k<=lf; k++)
        A[j][k] = max4( //Or min4 if m<i,d,r
            0,
            A[j][k-1] + d, //Deletion
            A[j-1][k] + i, //Insertion
            A[j-1][k-1] + equal(f[k-1],t[j-1])); //Replace or match
```

`equal()` returns m if characters match, r otherwise

Final score is greatest value in the entire table (or least value, if $m < i, d, r$)

One mechanism: Soundex

	aehiouwy	→	0 (vowels)
	bpfv	→	1 (labials)
	cgjksxz	→	2 (misc: fricatives, velars, etc.)
Translation table:	dt	→	3 (dentals)
	l	→	4 (lateral)
	mn	→	5 (nasals)
	r	→	6 (rhotic)

Four step process:

- 1 Except for initial character, translate string characters according to table
- 2 Remove duplicates (e.g. 4444 → 4)
- 3 Remove 0s
- 4 Truncate to four symbols

Better phonetic methods make use of the fact that some letters sounds alike in certain contexts, and different in other contexts

Editex uses the Edit Distance to compare strings based on a similar translation table to Soundex

lpadist uses a text-to-sound algorithm to represent tokens according to the International Phonetic Alphabet (but context matters a lot)

There are also worse variants, like Phonix.
